

Shivam Sharma

AI / Backend Engineer · 4.5+ Years

Noida, NCR, India | shivam12061999@gmail.com | +91-8373972304 | linkedin.com/in/shivam-sharma-1a53341b4

Summary

AI & Backend Engineer with 4.5+ years building event-driven microservices, LLM agents, and RAG pipelines in Python/Node.js. Hands-on with FastAPI, LangChain, AWS EventBridge, and vector search — targeting Senior SDE / AI Engineer roles.

Technical Skills

Languages: Python, NodeJS, JavaScript, TypeScript, PHP, SQL
Frameworks: FastAPI, React.js, NestJS, Pytest, PHPUnit, Laravel
AI / ML: LLM Agents, RAG, LangChain, LangGraph, SupaBase, ChromaDB, Ollama, Vector Search & Embedding, Semantic Caching, Prompt Engineering, Amazon Nova Act, Claude Skills/Hooks/MCP
Databases: MongoDB, MySQL, PostgreSQL, VectorDB, Redis
Cloud / Infra: AWS (S3, EC2, EventBridge, CloudWatch, Secrets Mgr, CDN), Azure AD (SSO), Docker, Kafka, WebSockets
CI/CD & Tools: GitHub Actions, SonarQube, Git, Postman, JIRA, Grafana, SumoLogic

Professional Experience

Software Engineer II, Trajector — Gurgaon, India

April 2025 – Present

- Optimized backend query performance (**fixed N+1 queries, rewrote joins**) and resolved critical production bugs, improving system stability and **API response times**.
- Architected an **event-driven** booking management system using **AWS EventBridge** and **Kafka** as a central event bus, enabling **asynchronous, decoupled communication** across 3 microservices **orchestrated via Docker** for real-time **call scheduling** — eliminating tight service coupling and improving fault tolerance / scalability.
- Engineered parallelised cron pipelines syncing **~2.5M documents** (EFS → S3) on **EC2** and **300+ client C-Files/day (10 GB)**, monitored with **CloudWatch** and distributed via **CDN**, cutting turnaround from **7–10 days to same-day**.
- Engineered a browser-level automation layer intercepting **XHR network calls** to extract and structure file metadata in real time, replacing an 8-hour manual review process with a 1-hour automated pipeline processing 10–20 documents/session — eliminated need for backend API changes by operating at the network layer, monitored via **Grafana** and **SumoLogic**.
- Built a **RAG-based** chatbot using **Amazon Nova**, **AWS Bedrock**, **embeddings**, and **vector search**. Enabled grounded natural-language Q&A over internal project and process documentation.
- Built an automated **PR Review Agent** using **GitHub Actions CI/CD** and **SonarQube**, streamlining static analysis and handling **50+ PRs/week**.

Software Developer I → II, Acefone Software Pvt Ltd — Gurgaon, India

Feb 2022 – April 2025

- Integrated **Stripe & Revolut** payment gateways, replacing manual offline balance-sheet reconciliation with automated subscription billing handling **500–1,000 transactions/day** and reducing billing errors to near **0%**.
- Boosted billing efficiency by **75%** via Xero invoice automation, eliminating **~20 hrs/week** of manual finance effort.
- Implemented **MMS/SMS messaging (Twilio)** delivered over WebSockets, enabling real-time two-way message streaming for **50K+ daily active users**, reducing message delivery latency by **40%**.
- Architected and shipped a new **SSO** implementation using **Azure AD**, rolling out unified single sign-on across **5+ internal systems**, securing access for **300+ staff members** and cutting login-related IT support tickets by **85%**.
- Built a NestJS microservice capturing **100K+ WhatsApp call-log events** into MongoDB, utilizing **Redis** for real-time caching.

Projects

Enterprise RAG Chatbot — Internal Knowledge Search

Python · FastAPI · LangGraph · LangChain · NOVA · OpenCV · PyAutoGUI

- Designed and deployed a fault-tolerant AI automation system using **Amazon NOVA Act**, **LangGraph**, **LangChain**, Python, **OpenCV**, and **PyAutoGUI** for browser and Citrix workflows. Built **stateful orchestration** with **in-memory checkpointing**, confidence-based screen-state detection, retries, validation, recovery flows, and **Human-in-the-Loop** escalation for unresolved states; reduced manual processing effort by 60

Education

Jaypee Institute of Information Technology (JIIT), Noida
Bachelor of Technology in Computer Science & Engineering
